

# ROLLER BLINDS DF

ROOF WINDOWS

## ROOF WINDOW ROLLER BLINDS

**The Benthin roof window roller blind is perfectly suited for all current models of roof window.**

The system was developed with a focus on optimised assembly, very quick and easy installation and maximum user-friendliness in top quality. It is available in two models.

**DF01** - A smart version with a cassette cover and retaining hooks.

**DF11** - A room-darkening version with a cassette cover and side channel.

The **DF01** version can easily be positioned in the holders with a smart handle profile. The handle profile can be held individually on two sides and fits in perfectly with the upper cassette profile when open.

Thanks to its spring-loaded cord threading unit, type **DF11** allows for an infinitely adjustable and perfectly horizontal positioning of the hanging over an ergonomically designed handle profile, which can also be operated with a control rod.

Quick, easy and very accurate fine adjustments are possible using the cord stretching device.

Type **DF11** offers nearly full room darkening.

Rubber seals are used to reduce the entering daylight.

An additional darkening flap (patent pending) is located in the cassette.

Furthermore, the end caps of the profiles are absolutely opaque, and perfectly match the profile colours.

All profiles are powder-coated in white or anodised silver/grey (E6/EV1).

### Optimised installation

The cassette is mounted using a universal holder (patent pending) for all types of windows.

Existing mounting fittings need not be removed.

An installation tool facilitates the exact positioning.

With the DF01, the holders can be attached just as accurately. Depending on the customer's preference, these can be fastened with either screws or nails.

A screw tool is available for the easy mounting of the side profiles.

### Sizes/unit dimensions

Unit widths from 0.35 m - 1.20 m  
Unit heights from 0.30 m - 1.60 m  
Angle of inclination of up to 60°

### Comprehensive documentation

Benthin will make all documentation available to provide you with easy access to the product.

Detailed documentation can help you build up an in-depth knowledge of the product.

This encompasses everything from the components catalogue with split views, through data sheets with information on every model, to illustrated installation instructions.

### Worksheet program

A software tool to configure the models with bill of materials, length information and a pricing.
