

Silent Gliss

CURTAIN TRACK SYSTEMS

The Sound of Silence ...

Silence just got even quieter with the new Silent Track range. Resolutely architectural, specially designed tracks married with unique, two-component (2C) gliders, resulting in unprecedented quietness.

Think of it as a reboot of Silent Gliss founder Alexander Weber's game-changing innovation from 1952, which set the bar for noise-free curtain-track performance. A number of patents later and Silent Gliss has taken another major step forward with its latest Silent Track range.

Two-component glider

The Funnel

As much about both sight as it is sound, the **Silent Track** sets the new standard for curtain track specifications for architects, interior designers and end-users who aren't prepared to compromise.

The systems are available in three sizes (S, M and L), with the track profiles coming in range of forms – square, oval, rectangular and funnel-shaped. Offered in a range of relevant colours, a functional product is transformed into a design element.

Coupled with a fabric from the Silent Gliss Collection – a decorative and functional range – we can deliver a complete made to measure curtain system.

... by Silent Track

Hard component
for stability

2C glider

Soft component
for noise absorption

The silent revolution – two-component technology!

The premium 2C gliders and rollers (patent pending), combined with the specially coated tracks allow the curtain to move smoothly and silently. These gliders are manufactured using 2 materials, a hard component which ensures stability and a soft 'filling' to absorb the noise. The end result is unprecedented silence.

THE FUNNEL

A new track design to draw attention in any room. The elegant, funnel-shaped profile is symmetrical in shape so is suited for use as a room divider. The Funnel features the refined 'click & fit' mechanism which makes it particularly easy to fit.

SILENT GLISS – THE BENDING SPECIALIST

Silent Gliss tracks can be forward and reverse bent to accommodate the most challenging installations. Advanced techniques and years of experience ensure maximum gliding efficiency on the tightest curves. Recess profiles are offered that can be bent to tightest radii – the curtains appear to literally hang from the ceiling!

SMART FIX – SOPHISTICATED WALL FITTING

Silent Gliss systems can be fitted with Smart Fix, a uniform bracket range. The design includes magnetic metal covers which are easy to fit and elegantly hide the screw. Three designs in various lengths offer flexibility and ease of installation.

Passion for details.

The best-selling SG 5600 electric curtain track is smooth, quiet and powerful. The combination of a 2C roller glider (patent pending), the high performance Swiss engineered motor and the specially coated track delivers the highest performance. An additional feature, the 'Touch & Go' function means a slight pull on the curtain will start it moving!

CORD OPERATED CURTAIN TRACKS
Cord operation avoids the need to handle the fabric and easily controls heavy curtains. The systems come in two distinctive designs and three sizes. The square tracks even feature a bendable recess profile.

All our cord operated curtain track systems are child safe and comply fully with safety norms EN 13120, EN 16433 and EN 16434.

HAND OPERATED CURTAIN TRACKS / CUBICLE TRACKS
Regardless of area, size, shape or colour, Silent Gliss are able to provide a hand operated track. The systems are available in three sizes and four outstanding designs. A bendable recess profile for the square track is also offered.

Suspended tracks are available – ideal when air circulation or room separation is required. In summary – the widest choice to provide the perfect finish for any interior.

Operation solutions for all situations

ELECTRIC CURTAIN TRACKS
For the ultimate convenience and ease of operation choose Silent Gliss electric curtains tracks. Whether at home or out, our wide range of control options ensure you can move your curtains at the touch of a button. Our Move App gives you access to your tracks via a smartphone or tablet, whilst our smart motors allow integration into most leading home and building management systems.

Technique and fabric – the flawless combination

WAVE – THE REINVENTION OF THE CLASSIC CURTAIN

Silent Gliss has created a unique curtain heading system that turns traditional curtains into a striking, modern design statement.

As an alternative to traditional pinch, pencil pleat or goblet style headings, Wave uses the unique 2C glider-cord to achieve a more contemporary look throughout the curtain drop: when opened, the curtains stack back neatly, and when closed the fabric hangs in a smooth, continuous wave.

THE COLLECTION – FROM SILENT GLISS

The Silent Gliss Collection sets itself apart by considering both the fabric's texture and technical features. We offer a wide range of fabrics, styles and colours that balance function and design across all of our window treatment systems.

We include fabrics with special functions such as acoustic performance, superior light management and environmental considerations. All of our fabrics are flame retardant and have been extensively tested on our systems to ensure consistent hanging behaviour. With such a wide choice, you can be sure to find the perfect fabric for your needs.
